Assortment

Warranty

High-quality, corrosion-resistant material. Up to 25-year warranty.

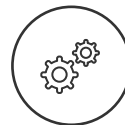

Variety

Wide range of flashings tailored to your roof's individual requirements.

Material quality

Durable, shape-retaining „Simpla 3“ profile sheets made from high-quality steel, coated on both sides with up to 275 g/m² of zinc.

Manufacturing process

Manufacturing according to strict quality - ISO 9001 - and environmental management - ISO 14001 - standards, using renewable energy.

Uniqueness

Options

A wide range of roof sheet lengths offers flexibility for complex roofs.

Installation

Easy and straightforward installation of the roof and facade cladding system.

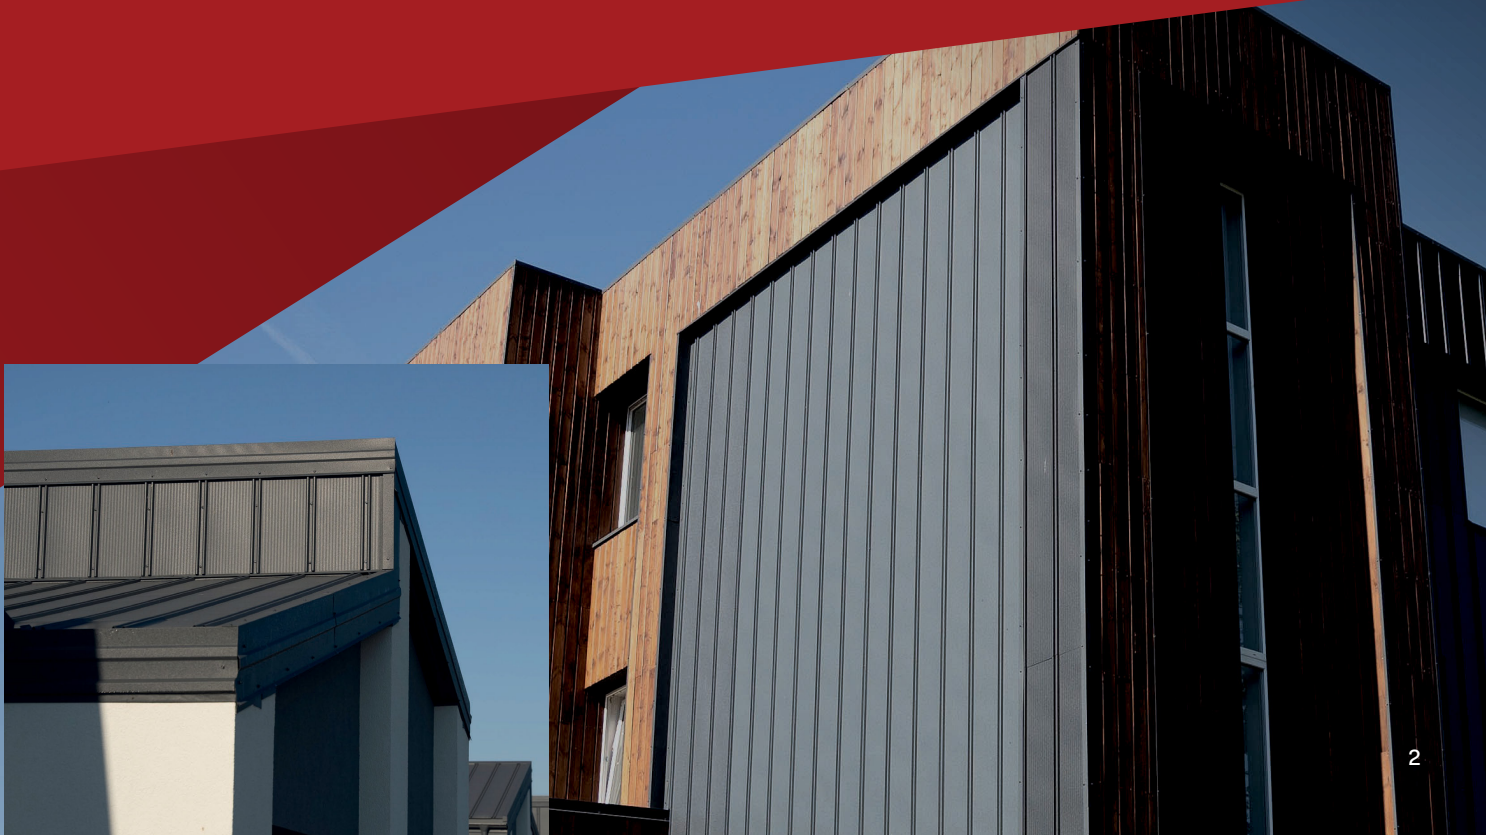

Design

A wide selection of colors and coatings gives you complete aesthetic control to create your dream home.

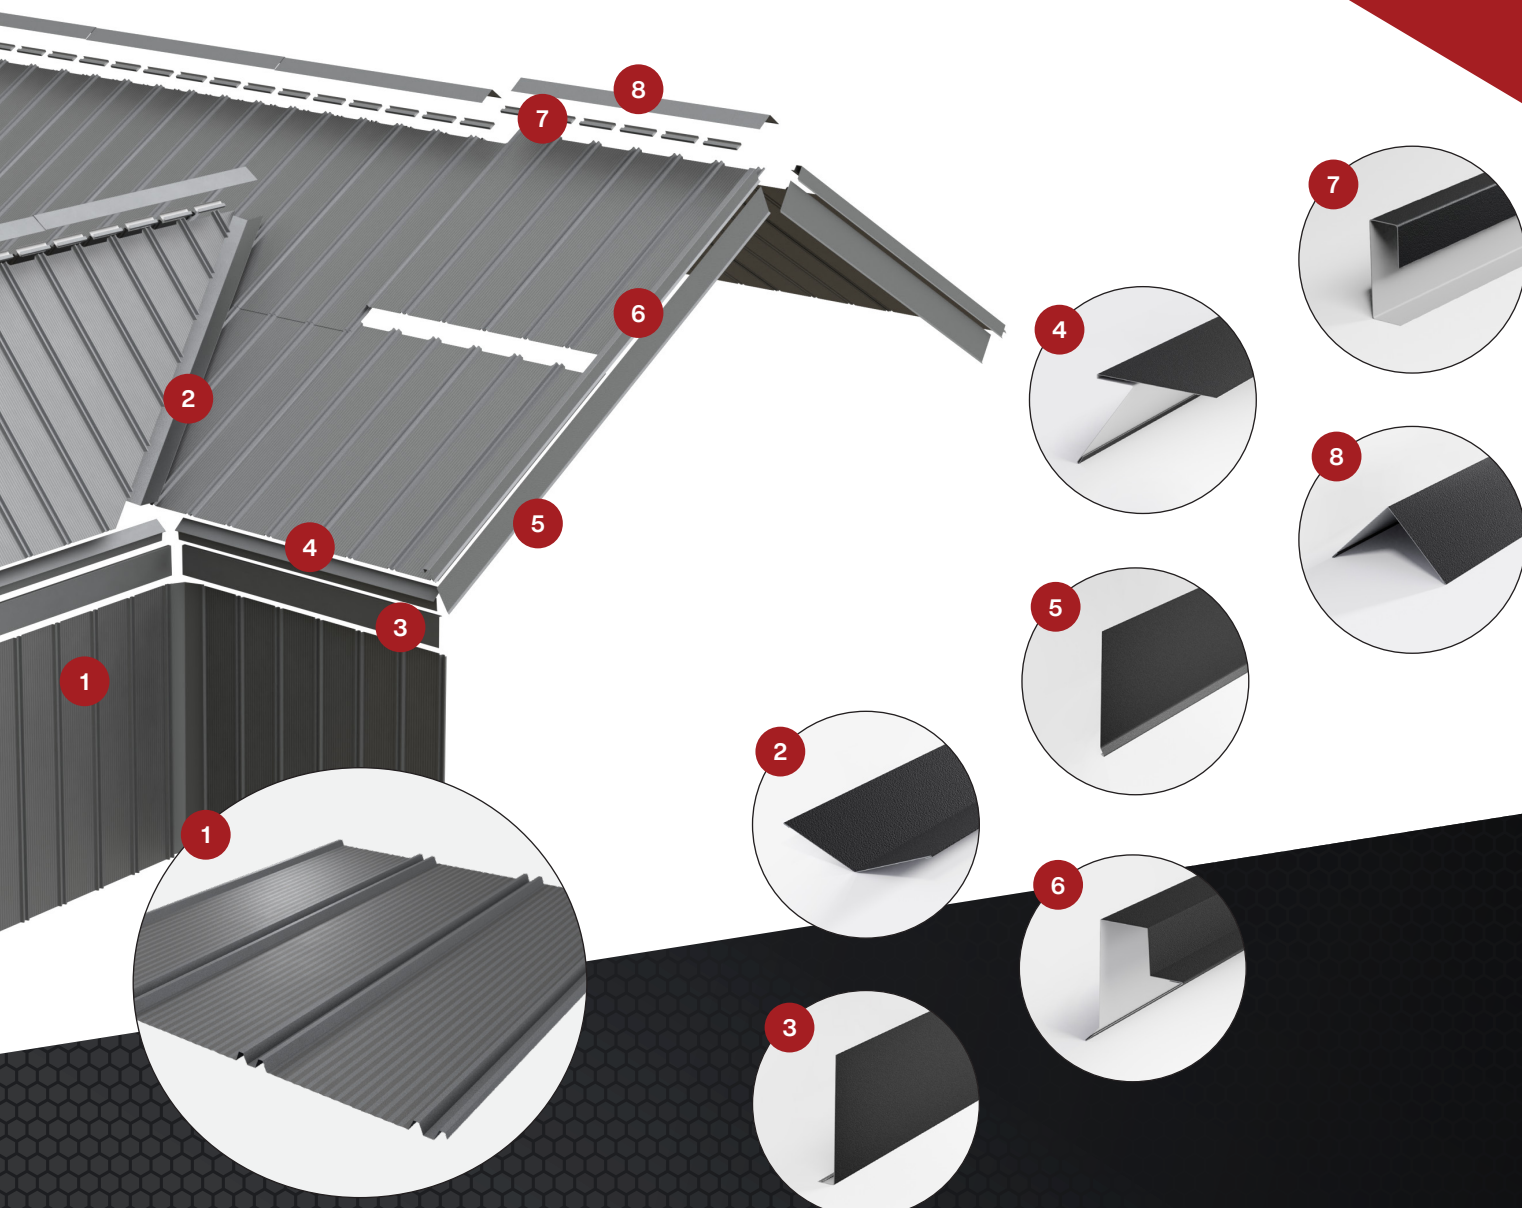

Customisation

„Simpla 3“ profile sheets can be installed on both the roof and the facade.

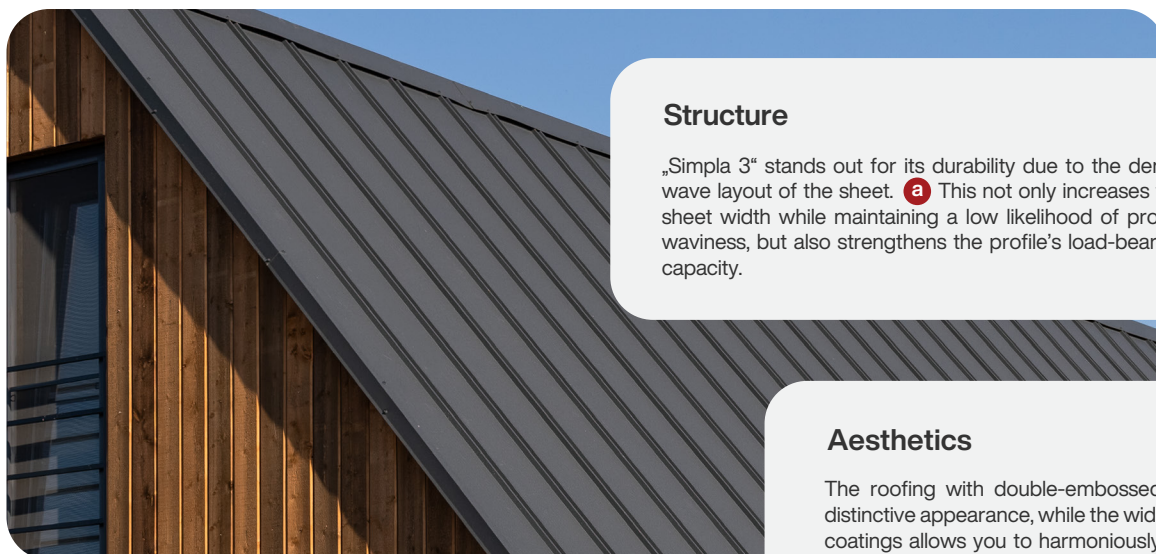

Components

- 1 „Simpla 3“ profile
- 2 Valley gutter
- 3 Verge trim
- 4 Troughed gutter
- 5 Lower wind brace
- 6 Wind brace
- 7 Ridge tile flashing
- 8 Ridge

„Simpla 3“ profile is designed to be both highly durable and aesthetically pleasing. The unique rib design adds distinctiveness to the profile, while the wide range of coatings and flashings not only simplifies installation but also allows you to create your dream environment.

Simpla 3 - profile

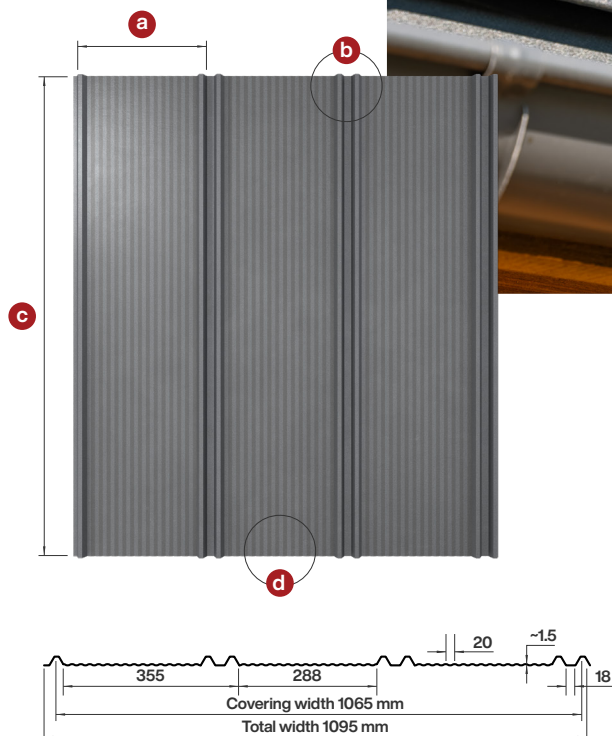

Structure

„Simpla 3“ stands out for its durability due to the dense wave layout of the sheet. **a** This not only increases the sheet width while maintaining a low likelihood of profile waviness, but also strengthens the profile's load-bearing capacity.

Aesthetics

The roofing with double-embossed waves **b** adds a distinctive appearance, while the wide range of colors and coatings allows you to harmoniously match the roof and facade system to your environment.

Individuality

„Simpla 3“ profile lengths are flexibly prepared according to your needs, ranging from 500 to 10 000 mm **c**, with or without cutouts. **d**

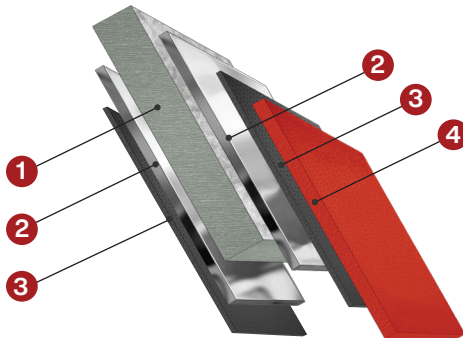

With cutouts

Without cutouts

Coatings

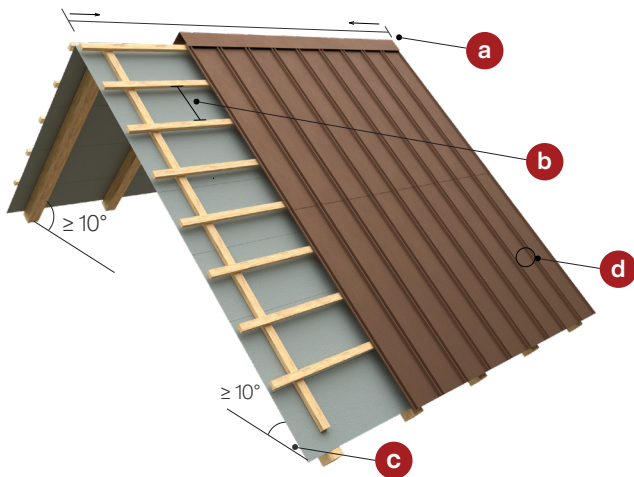

- 1 Steel core
- 2 Zinc alloy layer
- 3 Primer layer
- 4 Decorative coating

„Simpla 3“ profile is made of high-quality steel. Its front side is coated with a durable layer of paint, while long-lasting corrosion resistance is ensured by a strong steel core - up to 0.5 mm thick - zinc-coated on both sides.

The optimal paint layer provides strong resistance to wear, weather effects and pollutants in rainwater. These properties ensure the „Simpla 3“ profile is well protected against corrosion, guaranteeing long-lasting aesthetics.

Aluzinc	GLOSS	MATT	ULTRAMATT	Wood imitation
15 years warranty	15 years warranty	15 years warranty	20 years warranty	10 years warranty
Aluzinc	RAL 1015	RAL 7016	RAL 7016	Dark pine, 3D
	RAL 7016	RAL 8017	RAL 8017	Cream pine, 3D
	RAL 8017	RAL 8019	RAL 8019	White pine, 3D

	RAL 9006			
	RAL 9010			

Installation

a „Simpla 3“ can be installed starting from either the left or the right side of the roof.

b Depending on the batten width, a batten spacing of up to 200 mm is possible.

c Suitable for roof with a slope from 10°.

d Two surface design options.

e Universal application.

f Minimal sheet overlap.

g Does not require high precision for roof framing.

d

„Simpla 3“ profile is unique in that it offers two surface design options - smooth and micro-profiled.

The smooth surface roofing sheet embodies a sense of classic elegance and modernity.

The micro-profiled surface sheet not only conveys a sense of unity and harmony but also provides additional protection against waviness for the roofing material.

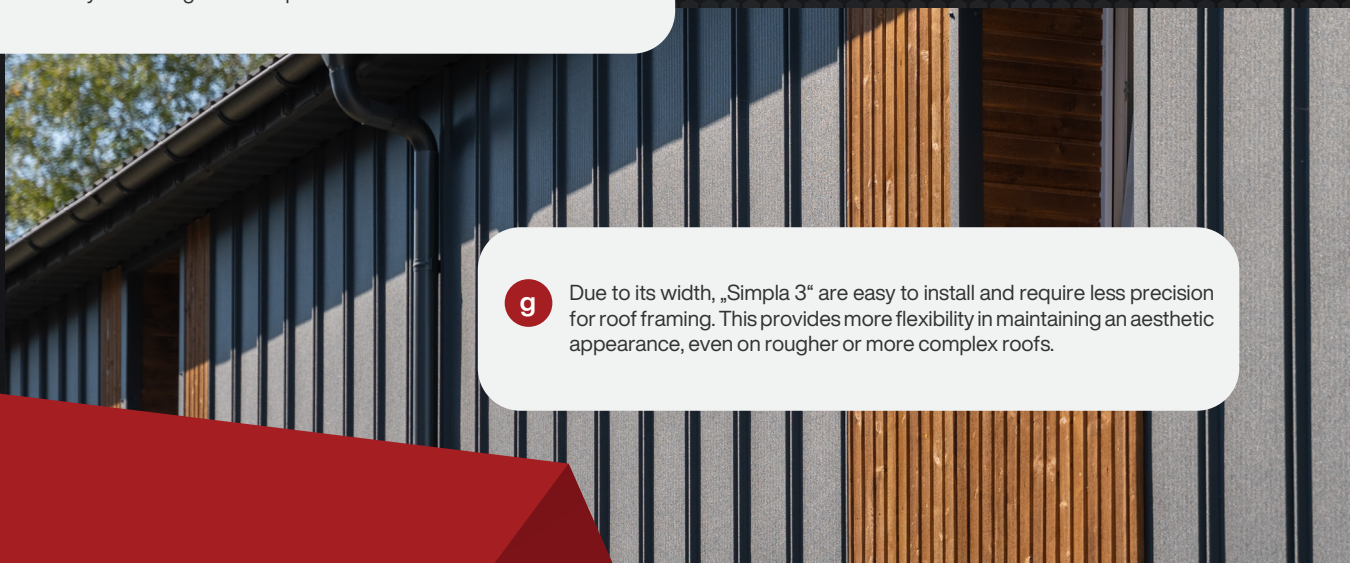

e

Due to its unique structure, „Simpla 3“ can be installed on both the roof and the facade, offering you broad exterior design possibilities. It is a versatile solution suitable for buildings of various purposes.

f

The increased width of the „Simpla 3“ sheet allows for more efficient roof coverage, reducing the number of sheets required. Fewer sheets not only optimize the workload but also significantly decrease the likelihood of leaks by minimizing the overlap areas.

g

Due to its width, „Simpla 3“ are easy to install and require less precision for roof framing. This provides more flexibility in maintaining an aesthetic appearance, even on rougher or more complex roofs.
